Thesis Title

Thesis author

August 23, 2016

A thesis submitted for the degree of
Doctor of Philosophy of
The University of Wherever

Institutional Address

Research School of Taxidermy
Building 13
University of Wherever
Some Country

Supervisory Panel

Prof. Alex Pingu (Panel Chair)
Research School of Taxidermy
The University of Wherever

Dr. John Oldmate
School of Cooking
The University of Wherever

Set in Alegreya with the help of KOMA-Script and XeLaTeX.

For my Ma and Pa

Except where otherwise indicated, this thesis is my own original work.

My name
August 23, 2016

Publications

Here's some stuff I wrote.

Acknowledgements

Thanks so much, everyone. You're all fantastic and I love youse all.

Abstract

If I was forced to describe this thesis in less than 500 words, this is how I'd do it…

List of Figures xi

List of Tables xiii

1. Introduction 1

2. The second chapter 5

3. Conclusion 7

3.1. Summary of contributions 7

A. An appendix 9

List of Figures

1.1. A picture of an anchor. Shared by flickr user `phill.lister` under a Creative Commons attribution licence (CC BY 2.0). 2
1.2. An example of a multi-part figure using the `subcaption` package. Pictures shared by flickr user `pamplemousse2007` under a Creative Commons attribution licence (CC BY 2.0). 3

List of Tables

1. Introduction

We've only just begun...

(The Carpenters—We've only just begun)

There are lots of good places to get help with writing LaTeX, so I won't go into that here. It is worth noting that the packages used in this thesis template (which you can see if you read the 'header' of the `thesis.tex` file have pretty good documentation, so it might be worth looking at that for clues on how to use the `glossaries`, and the `csquotes` package.

For figures, you can either use single figures (as in fig. 1.1) or multi-part figures (as in fig. 1.2) using the `subcaption` package. Also, notice that the word 'figure' (or 'table', or 'equation') is automatically inserted by the `cref` macro from the `cleveref` package. Isn't that *clever*.

Figure 1.1.: A picture of an anchor. Shared by flickr user `phill.lister` under a Creative Commons attribution licence (CC BY 2.0).

(a) A dog.

(b) The same dog (presumably), but this time upside-down. Crazy times.

Figure 1.2.: An example of a multi-part figure using the `subcaption` package. Pictures shared by flickr user `pamplemousse2007` under a Creative Commons attribution licence (CC BY 2.0).

2. The second chapter

> The road is long,
> with many a winding turn
> That leads us to who
> knows where, who knows where?
>
> *(The Hollies, He 'Aint Heavy)*

Now, all you have to do is write your thesis. Piece of cake.

3. Conclusion

You probably should tie it all together here.

3.1. Summary of contributions

Some bollocks
We did some bollocks, and it was pretty interesting.

Some other bollocks
Really, if you think about it, we did a whole other lot of bollocks as well.

A. An appendix

Put any appendices here—they are just like regular chapters, except they follow the `\appendix` directive.
